

E380 Series Integrated Universal Inverter

Features:

- Power range: 1.5 - 400KW
- Input voltage range: $220V \pm 20\%$, $380V \pm 20\%$, $415V \pm 15\%$
- Removable Dual LED display keypad: Easy for monitoring and parameters copy
- Adopts modular principles in development: Integrated functional modules for drawbench, textile machine and constant pressure water supply
- Completely isolated main circuit and independent cooling duct design ensure the lowest failure rate
- Unique pulse width modulation and adaptive control technology
- Cooling fan On/Off selectable: Reduce energy consumption of inverter
- Built-in PID controller with sleep / wake up functions to maintain a constant pressure, flow and oil level
- Automatic energy saving: Adjust output voltage and slip frequency compensation timely to make motor work at the highest efficiency
- Automatic voltage regulation: Automatically keep the output voltage stable when input voltage fluctuating
- RS485 communication supports standard Modbus-RTU protocol
- Support remote operation up to 1000m distance

Typical Application:

Pumps and fans, Extruder, Automatic production line, Air conditioner, Water supply, Food machine, Blender, Packing machine, Medicine machine, Conveyor, Blowmolding machine, Oil pump, Fountain, etc.
